The cDNA was isolated from a human liver cell cDNA library, and from tissue localisation studies has been found to be expressed only in the liver. The protein has homology with the rat organic cation transporter (EMBL Accession No. V09945) which is involved in drug excretion, and may have a similar function. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Kato

the liver. The protein has homology with the rat organic cation transporter (EMBL Accession No. 709945) which is involved in drug excretion, and may have a similar function. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors,
                                                                                                                      domains. The cDNA was isolated from a human liver cell cDNA library, from tissue localisation studies has been found to be expressed only
                                                                                                                                                                  encodes a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; sheep; pig; cow; fruit fly; yeast; hamster; macaque; tomato; monkey; dog; sea urchin; expressed sequence tag; ES diagnostics; forensic test; gene mapping; genetic disorder; biodiversity; gene therapy; nutrition; ss.
                                                                                                                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA

CC haematopoiesis regulatory activity; tissue growth activity; cismunomodulatory activity; activity: haemostatic, thrombotic or chemokinetic activities; proliferation or metastasis.

CC pending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions or arthritis), cronic inflammatory conditions (e.g., asthma or arthritis), conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell conditions, chronic inflammatory conditions (e.g., asthma or arthritis), conditions bone disorders (e.g., osteoporosis) and abnormal consciular growth. Polypeptides involved with tissue regeneration and conceptation (e.g., of burns, incisions and ulcers), while those with conditions of the inflammatory activities may be used in the treatment of viral, conditions in addition to immune disorders.
                                                Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention in have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides are polypeptides in a sample, and methods of identifying compounds which being the polypeptides in a sample, and methods of identifying compounds which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tang

                                       transporter (hOAT) polypeptides are preferentially transporter (hOAT) polypeptides are preferentially expressed in the liver and kidneys of humans. OAT's are membrane expressed in that facilitate the transport of organic anions across the proteins that facilitate the transport is thought to be a secondary cell membrane. The mechanism of transport is thought to be a secondary or tertiary active transport involving exchange of another organic anion. Or tertiary active transport involving exchange of another organic anion. Or tertiary active transport involving exchange of another organic anion. It is a secondary to be splice variants as they are how identical except at the C-terminal end. how proteins and the DNA identical except at the C-terminal end. how proteins and the DNA identical except at the C-terminal end.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunosuppressant and cytostatic activity. The polypoptide or polypucleotides are useful in gene therapy. A composition containing a polypoptide or polypucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as lateral sclerosis, and shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and shy-Drager Syndrome. Other uses include the activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

PR PR PR

Novel human transporter and ion channel proteins useful for treating and preventing transport, neurological, muscle and immunological

Claim 5; Page 147; 160pp; English.

PR XXX PR PI PA X XXX PR PI PA X disease, Duchenne muscular dystrophy, angina and hypertension, neurological disorders including Alzheimer's disease, amnesia, bipolar The present sequence is transporter and ion channel-10 (TRICH-10) cDNA. TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, cystic fibrosis, Becker's muscular dystrophy, Charcot-Marie Tooth disease Duchanne muscular dustronhy and humantaries. dementia, depression, epilepsy, ischaemic cerebrovascular

AAC61879-93 encode secreted human proteins. The secreted proteins are useful in assays to determine their biological activities. The proteins can also be used as biomarkers to identify tissues or cell types which express the proteins. The polynucleotide molecules can be used as biomarkers for tissues or chromosomes and to elicit immune responses. The proteins and antibodies are useful in diagnosis and treatment of diseases associated with altered expression of these proteins. The proteins are also useful for prevention or treatment of platelet disorders, stem cell disorders, osteoporosis or osteoarthritis, burns, inclisions, ulcers, periodontal diseases, central and peripheral nervous system diseases and neuropathies, for healing fractured bones and to induce cartilage and/or bone growth in cosmetic plastic surgery. The proteins are also useful for gut protection or regeneration, for the treatment of lung or liver fibrosis, for stimulating blood cell
                                   generation in patients receiving cancer chemotherapy and for treatment of bone marrow transplantation patients.
                                                                                                                                                                                                                                                                                                                                                                       Novel secreted human proteins useful for stimulating blood cell generation in patients receiving cancer chemotherapy, treating l marrow transplantation patients and for healing fractured bones

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                        The sequences given in AAC85819-24 encode human organic anion transporter (hOAT) polypeptides. hoAT polypeptides are preferentially expressed in the liver and kidneys of humans. OAT's are membrane proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary or tertiary active transport involving exchange of another organic anion hOAT2A and hOAT2B are thought to be splice variants as they are identical except at the C-terminal end. hOAT proteins and the DNA identical except at the C-terminal end. hOAT proteins and the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAC85823 standard; DNA; 1977

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 4990; 10078pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (HYSE-) HYSEQ INC

```
The present sequence is human protein with hydrophobic domain encoding CC cDNA clone Hp03613. The polynucleotide and polypeptide of the invention CC associated with inappropriate polypeptide expression. The polynucleotides CC into a host cell and culturing the cell to expression. The polynucleotides CC into a host cell and culturing the cell to express the protein. The CC polynucleotides and its complementary sequences may also be used as DNA CC probes in diagnostic assays and also used in gene therapy. The CC properties may also be used as antigens in the production of antibodies are civity. The polypeptides and nucleic acids may be used as nutritional CC and in assays to identify modulators of polypeptide expression and CC supplements, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of rheumatoid arthritis and insulin-dependent diabetes), to modulate complements of modulate cissue growth activity (e.g. for the creatment of parkinson's disease, Huntington's disease and Alzheimer's classes), to modulate activin and inhibin activity (e.g. for the creatment of parkinson's disease, Huntington's disease and Alzheimer's classes), to modulate chemotactic and chemokinetic activity, to modulate receptor induced activity, to modulate receptor to the controlling modulate haemostatic and thrombolytic activity, to modulate receptor to the controlling to the controlling modulate activity and inhibin activity to modulate receptor to the controlling modulate haemostatic and thrombolytic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 4; Page 252-257; 563pp; English.

                                                                                                                                                                                                                                                                                                        The present sequence encodes a human placental organic anion transporter designated OAT4. OAT4 has nephrotrophic activity. The OAT4 protein and encoded gene are useful in studying causes of abnormality, including the application of a variant nucleic acid as a probe to detect the presence of a gene encoding the transporter OAT4, or to identify or quantify such gene, and in developing drugs to prevent or treat various kidney diseases and abnormal foetal growth.
